57. **Were there any unique factors that led Smart Field Service(SFS) to select those technologies?**

Backend-We chose Python because it is effective for Rapid Application Development, which provides developers many options for prototyping, enables them to utilize pre-made components, and accelerates the development process. Yes, the initial effects are indeed readily apparent.Django is a potent web framework that benefits from a sizable, engaged community as well as extensive documentation. It makes it quick and simple to create complex web applications with little code.**Frontend-**A library is React.js, Next.js. We utilize it because it

works well for a variety of projects, quick implementations, prototyping, and proof-of-concept development. It is easy to use and scalable.When it comes to corporate projects, we pick Angular.js. It's a framework that works well for complicated apps and systems like CRMs and CMSs.

58. **What influenced Smart Field Service(SFS) decision to adopt those particular technologies in development?**

We work in a short iteration mode and regularly test the work results, taking into account all client preferences and the target client reaction. This approach allows us to provide our customers with high-quality products, observing the specified deadlines. Quality is our top priority.

77. **Testing procedures Smart Field Service(SFS) follow to guarantee product quality?**
We work in a short iteration mode and regularly test the work results, taking into account all client preferences and the target client reaction. This approach allows us to provide our customers with high-quality products, observing the specified deadlines. Quality is our top priority.

78. **Provide product support services after the app development is complete at Smart Field Service(SFS)?**
Yes, we are always glad to provide technical support and service to the apps we have developed. We can also further develop your software product if you need to implement new features or integrate third-party services.

79. **Tell the post-launch support and maintenance services Smart Field Service(SFS) offer?**
Yes, we are always glad to provide technical support and service to the apps we have developed. We can also further develop your software product if you need to implement new features or integrate third-party services.

80. **Is there ongoing support available after the app is developed at Smart Field Service(SFS)?**
Yes, we are always glad to provide technical support and service to the apps we have developed. We can also further develop your software product if you need to implement new features or integrate third-party services.

81. **Will Smart Field Service(SFS) be able to increase the number of people in your team if necessary?**
If you wish to partly reduce the project work intensity or, on the contrary, to increase it at times, we are always ready to adapt to your needs. When necessary, we will easily involve more team members in your project to meet your expectations.

82. **What is the minimum budget and the project size Smart Field Service(SFS) are willing to work with?**
It basically depends on project to project. Over the years, our portfolio has been enriched with both large enterprise solutions and apps designed to implement single-person ideas. The project size is not that important to us, but its benefits and ability to solve specific problems are.

83. **Project size Smart Field Service(SFS) are willing to work with?**
It basically depends on project to project. Over the years, our portfolio has been enriched with both large enterprise solutions and apps designed to implement single-person ideas. The project size is not that important to us, but its benefits and ability to solve specific problems are.

84. **Minimum budget for a project at Smart Field Service(SFS)?**
It basically depends on project to project. Over the years, our portfolio has been enriched with both large enterprise solutions and apps designed to implement single-person ideas. The project size is not that important to us, but its benefits and ability to solve specific problems are.

85. **What does the Smart Field Service(SFS) software development process look like?**
A product development process stands for the multiple stages that a software development team takes to bring the idea of a product into reality by undergoing software product development steps.Thus, we rely on the software development life cycle (SDLC). The procedure implies building high-quality software within the shortest possible period, in line with the 7 phases of the software development

life cycle.The development life cycle phases involves:the assessment of the user's needs,research on customer behavior and marketplace competition,creation and visualization of the roadmap,concept design,code development,creation of a minimum viable product.With a seamless and well-designed SDLC process, we don't miss a thing and find the balance and the best possible solutions between different actions while developing software.

continuous communication with the client, so that there are no surprises and we move forward in the development only after the client's approval.

99. **What can Smart Field Service do for a client?**
We will do our best. designing roadmaps, preparing cost analyses, and defining team responsibilities. defining the target users, important values, primary features, and priorities for the business. Can locate competing projects that are currently on the market for you to compare your idea against. We can help you with project status determination, project estimate, and the creation of user personas, mock-ups, user stories, and time frames. We'll be pleased to provide project specs, wireframes, information on how to integrate with outside services, API documentation, and a list of necessary features.In terms of project development, we prepare server-side architecture, front end, back end, graphic and UX design, and create back-office consoles.We are also happy to advise our customers in terms of budgeting, scheduling, risk management, and business model creation.

100. **How do I work with Smart Field Service(SFS) to develop a product?**
Contact us by phone, email, or our online form if you have a suggestion. We'll get together and discuss it. Just be sure to have as much information about your concept prepared as you can; this will make the meeting go more smoothly and promote future collaboration. Go ahead and read our blog post on how to create a project brief if you don't know how to start.

101. **What should I know before getting in touch with Smart Field Service(SFS)?**
The most crucial factor to consider is what you hope to achieve. I need this program, but why? Who knows? What ought it to do? When buying a software program, it is essential to have a clear vision in mind. Without knowing what you need, you don't want to spend months building it with us. If you've never worked on an app, feel free to read our blog post on the subject. Since we have experience creating projects from scratch, we will also be happy to assist you in getting started.

102. **How to use technology to work with Smart Field Service(SFS) and purchase software?**
We're here to help, so you don't need to be an expert in software development. If you have any experience in that area, please share it with us. Otherwise, we are happy to walk you through the entire procedure and explain everything. Keep your demands in mind, and we'll provide what you need.

103.   How long will it take Smart Field Service(SFS) to create an application?
We must first construct a project scope and a budget in order to respond to you precisely. After at least a month of work, we will be able to tell you how much of that scope can be achieved within the budget and give you an estimate of how long it will take. You can cancel the project without incurring any fees if you're unhappy with our work after two weeks. This is our trial period, and we feel that any reputable software company should provide one. To find out more about our procedures, see our blog post.

104.   How can be certain that Smart Field Service(SFS) put as much effort into a project as Smart Field Service(SFS) claim?
Our developers are closely watched, and we precisely track how long they spend on each assignment. To keep track of the time spent on your project, we utilize Redmine and the Harvest program.

105.   Does Smart Field Service(SFS) offer standalone design services?
The short answer is yes. In many cases, it's obvious the user interface needs to be improved, but it's typically the beginning of a much bigger conversation. Design done in a vacuum without considering cross-functional perspectives is delaying inevitable disappointment. We do research, prototype, and high-fidelity polished deliverables, but if we don't talk about how that impacts how people use your product or the feasibility of building it, you could end up right back where you started.

106.   Does Smart Field Service(SFS) have an issue with a client's desire to participate in the app development process?
In no way! We want you to feel certain that you'll get the product you want. We welcome you to critique and enhance our work at every level, from conception to completion. Our attitude is to collaborate with the customer rather than just do assignments. We're always willing to talk and listen.

107.   What happens when an application is finished?
I hope the software fulfills all of your expectations:) But in addition to providing you with a final product, we are also pleased to offer you any necessary technical assistance and app maintenance. After all, we are experts in our field. The source code and all technical information are available to you if you choose to manage the app yourself, but even in that scenario, don't hesitate to get in touch with us if you need any support.

108. Do Smart Field Service(SFS) offer maintenance and support services?
Many customers take over the long-term care and feeding of systems we build. In those cases, we work closely with those teams to make sure that transition is effortless and drama-free.In other situations, customers need continued outside support. We have support plans if customers don't have the right team ready to take over the product, although long-term we encourage them to grow the capability internally. A Maintenance and Evolution engagement can be as simple as making sure the software is up-to-date and secure, or a hybrid model where we fix bugs and add new features.

109. Do Smart Field Service(SFS) have any endorsements from pleased clients?
Absolutely! View the testimonials from our clients on our collaboration. For more information visit www.smartfieldservice.com
